# DIGEST

Calendar Year 1976 Agricultural Exports to USSR Increase by One-Third (see p. 4). Farm product exports to the USSR in 1976 totaled \$1.6 billion, setting a new record. Grain and soybeans accounted for virtually all the agricultural export volume. Shipments of agricultural related machinery and equipment were also substantial. Prospects for agricultural exports in 1977 now appear less promising, and may total about \$1.2 billion.

\* \* \* \* \*

West Germany--A Prime Market for U.S. Agricultural Exports (see p. 9). West Germany is one of the world's largest markets for agricultural imports, taking over DM 31 billion (\$10.1 billion) worth in 1975. U.S. agricultural exports to West Germany totaled \$1.8 billion in 1976. Providing 60 percent of the total value of West German agricultural imports in 1975, other EC countries are West Germany's predominant source of imports and stiff competitors for the United States.

\* \* \* \* \*

Agricultural Exports Reach Record \$23 Billion in 1976 (see p. 26). A new record of \$23 billion was achieved in farm product exports during 1976. Value was 5 percent above last year and 4.5 percent higher than 1974's \$22 billion.

\* \* \* \* \*

Record Agricultural Imports of \$11 Billion in 1976 (see p. 92). Record agricultural imports of \$11 billion in 1976 were 18 percent above the 1975 level. Most of the increase occurred in noncompetitive items, mainly green coffee. Both volume and value of coffee imports continued to rise in December. Coffee import prices were \$1.398 per pound in December 1976 compared with \$.683 per pound in December 1975.

\* \* \* \* \*

International Price Highlights (see p. 138). In 1976, overall U.S. agricultural trade prices remained at about the same level as they were in 1975, with price developments for some commodities offsetting those for others. The index of U.S. agricultural export unit values declined 7 percent, while the index of U.S. agricultural import unit values rose 6 percent. In December, trade prices strengthened for corn, sorghum, soybeans, soybean meal, cotton, imported cow meat, coffee, and cocoa beans. Wheat, rice, sugar, and crude rubber prices weakened.

\* \* \* \* \*

U.S. Agricultural Exports Adjusted for Transshipments, Fiscal Year 1976 (see p. 145). Because of intransit shipments of bulk agricultural commodities such as grains and oilseeds through intermediate ports, preliminary estimates of U.S. farm exports to many countries are understated. Direct shipments to East European countries are substantially understated because of transshipments through Canadian and West European facilities.

# CALENDAR YEAR 1976 AGRICULTURAL EXPORTS TO USSR INCREASE BY ONE-THIRD

---

by  
Judith Goldich

U.S. agricultural products valued at nearly \$1.6 billion were exported to the USSR during calendar 1976. <sup>1/</sup> The greatly increased total value--up one-third over 1975--was the result of substantially larger exports of corn and soybeans.

Grain--almost all corn--and soybeans accounted for 99 percent of the exports. Despite somewhat lower unit value prices for wheat and corn and substantially lower prices for rice (table 2b) in 1976, greatly increased corn volume helped boost export values to a new calendar year record. January-June corn shipments totaled nearly 7.8 million tons (excluding transshipments)--almost four-fifths of the year's total. Much of the corn shipped in the first 6 months of 1976 was purchased as a result of the very poor Soviet grain harvest in 1975.

Exports of soybeans expanded sharply--to 579,000 tons from the 15,000 tons transshipped via Canada in the preceding year. The 1975 purchases--most of which were shipped in 1976--were apparently made in response to the Soviets' poor sunflowerseed crop that year. Purchases of more than 1.5 million tons of soybeans for shipment from the 1976 crop, including 800,000 tons of U.S. origin and another 700,000 tons of optional origin, were made in early July 1976, most likely before an assessment of the domestic sunflowerseed crop could have been made. This timing suggests that the 1976 purchases may have been made without reference to the domestic oilseed crop, possibly in response to farm demands for increased feed protein for livestock. If so, yearly purchases, though not necessarily of U.S. beans, may become the rule as the Soviets attempt to increase meat output. However, it should be noted that roughly half of the Soviet purchases of soybeans for delivery in 1976/77 were of optional origin and while 181,000 tons of optional origin beans have been transferred to U.S. origin and shipped, another 213,000 tons of U.S. origin bean purchases had been cancelled by the end of 1976.

Although not included in the agricultural export value figures, some machinery and equipment designed to simplify grain handling and storage were exported to the USSR in 1976. Through September, the United States had shipped \$330,200 worth of vacuum and air pumps, over \$4 million in dust collection and air purification equipment, and \$5.5 million worth of prefabricated iron and steel storage structures and vats.

## Agreements Implemented

Shipments of U.S. grain under the terms of the U.S.-USSR agreement on the sale of grain began in late October, with Soviet purchases for shipment during the first agreement year (1976/77) having been made early in 1976. The Soviets have now purchased 6.4 million tons of grain, 2.9 million of wheat, and 3.5 million of corn, for delivery during the first year of the agreement.

Implementation of the terms of the 1975 U.S.-USSR Maritime Agreement has caused some difficulties. Although U.S. and Soviet officials agreed that a 1977 freight rate for

---

<sup>1/</sup> Data include value and volume of goods transshipped through Canada. Data on transshipments through the Netherlands are reported separately (table 3b) and are not included in totals.

grain being shipped to the Soviet Union on U.S. flag vessels would be negotiated before the end of 1976, early negotiations were broken off without reaching any agreement for 1977. A second problem was the Soviets' failure to charter sufficient freight capacity on U.S. flag carriers. Under the terms of the agreement, U.S. flag vessels were to have the opportunity to carry not less than one-third of all the cargo moving to the USSR, but in practice significantly less than that amount actually was transported in U.S. bottoms.

#### U.S. Imports Up Slightly; Total Remains Quite Low

U.S. agricultural imports from the Soviet Union reached \$8.5 million in 1976; up from \$7.2 million in 1975. Furskins of various types accounted for most of the total, as in the past. U.S. purchases remained quite small in comparison with U.S. sales to the Soviet Union.

#### Prospects for 1977 Dimmer

Prospects for 1977 calendar year exports to the USSR seem somewhat dim and it now seems unlikely that the 1976 volume record will be equaled. The Soviets will take delivery of the remainder of their first year's purchases of grain under the grain agreement during the first 9 months of the year and may begin taking delivery of some of their purchases for the second "agreement year" in October. However, relatively low prices for wheat and corn are expected to prevail through the end of their respective 1976/77 crop years, holding down the value of sales. Barring a poor Soviet grain crop or a third-in-a-row sunflowerseed crop failure--the resulting requirements of which could be expected to increase Soviet purchases--U.S. exports to the Soviet Union are forecast at around \$1.2 billion in 1977.

# WEST GERMANY--A PRIME MARKET FOR U.S. AGRICULTURAL EXPORTS

---

by  
Cynthia A. Breitenlohner

Industrially oriented West Germany is one of the world's largest markets for agricultural imports, taking over DM 31 billion (\$10.1 billion) worth in 1975 (table 4). <sup>1/</sup> As a market for U.S. farm products, West Germany ranked third in 1976. U.S. agricultural exports to West Germany totaled \$1.8 billion (table 8). Other EC countries are West Germany's predominant source of imports--providing 60 percent of the total value of West Germany agricultural imports in 1975--and are stiff competitors with the United States.

In 1975, West Germany registered a total trade surplus of DM 37 billion (\$11.9 billion), a drop of over DM 13 billion (\$4.2 billion) from 1974. The world recession caused foreign demand for West German goods to slip, while West German demand for imports continued to rise. The West German agricultural trade deficit totaled DM 20.7 billion (\$6.7 billion) in 1975, up slightly from 1974. West Germany's agricultural trade deficit doubled between 1960 and 1975.

Agricultural imports as a share of total imports dropped from 26 percent in 1960 to 17 percent in 1975, while agricultural exports as a share of total exports increased from 2 to 5 percent. Since West Germany is an industrial nation, with rising disposable incomes, it is to be expected that agricultural imports as a percent of total imports should decline. Traditionally, in a developed country with an adequate diet, as disposable income rises, the percent of income spent on food tends to decline. The upward trend in agricultural exports is unusual, however, since West Germany has relatively limited land resources for agricultural production. It is explained in part by the fact that the increase has been in semiprocessed rather than raw agricultural products.

On a per capita basis, agricultural imports, although rising steadily, have increased slower than disposable income. Agricultural exports and total exports and imports, on the other hand, have been increasing more quickly than disposable income, also on a per capita basis. (table 6).

Of the EC countries (Belgium, Luxembourg, France, the Netherlands, Italy, the United Kingdom, Ireland, and Denmark), the Netherlands is the single largest supplier of West Germany's agricultural imports. In 1975, the Netherlands' market share was 29 percent. During 1971-75, the U.S. share was 10-13 percent (table 7).

The EC's large share of the West German market is due primarily to the EC's variable-levy system that is applied to imports originating outside the EC. These levies cover a wide spectrum of products. For commodities not subject to the levies, the common external tariff applies.

West Germany imposes stringent sanitary, health, and labeling regulations on many imports, as well as quotas on some commodities not regulated by the EC. Health and labeling restrictions have hampered sales of some U.S. consumer goods to West Germany.

---

<sup>1/</sup> Excludes raw cotton, unmanufactured wool, and hides and skins, but includes fish and brandy. Value is cost, insurance, and freight (c.i.f.) basis.

The regulation prohibiting imports of fruit treated with diphenylamin is one example.

The major West German agricultural imports, on a value basis, are fruits and vegetables, animal fats and oils, grains and products, oilseeds and products, and meat. U.S. exports to West Germany consist primarily of feed grains, soybeans, and soybean meal (tables 8 and 9).

#### Commodity Review

Fruit and vegetable imports, including preparations, totaled DM 7.6 billion (\$2.5 billion) and accounted for 24 percent of total West German agricultural imports in 1975 (table 10). Although the West Germans produce many varieties of fruits and vegetables, some of these products and all citrus and tropical fruits must be imported. Oranges, bananas, and apples are the major fresh fruits imported, while potatoes, tomatoes, and cucumbers are the primary fresh vegetables imported.

In 1975, imports of eating apples totaled 604,900 tons, with other EC members accounting for about 77 percent. During the off-season, Argentina, South Africa, and Australia provide apples for the West German market. U.S. shipments of apples to West Germany in 1975 were only 204 tons. The West German restriction against apples and pears treated with sodium-orthophenyl-phenate (SOPP), ethoxiquin, and diphenylamin has severely limited U.S. exports of both fruits to West Germany.

Tropical and citrus fruit imports by West Germany in 1975 totaled 1.7 million tons (table 11), including 547,912 tons of fresh bananas and 815,263 tons of fresh oranges. Costa Rica, Ecuador, and Panama are major suppliers of bananas to the West German market. Spain, with 58 percent of the market in 1975, is by far the major supplier of oranges. Because of preferential agreements between Spain and the EC, Spanish citrus fruit is given an import duty reduction of 40 percent.

Grapefruit is the major U.S. citrus fruit bought by West Germany. In 1975, the United States was the third-ranking supplier, providing 10,298 tons, or about 10 percent of the market. The U.S. share has risen despite stiff competition from Israel, the major supplier to the West German market. Israeli grapefruits also benefit from tariff reductions.

West Germany is the second largest grain producer in Western Europe, with wheat and barley the primary grains grown. Feed grains, primarily barley, account for approximately two-thirds of total grain production. The West Germans produce little corn and no rice.

West Germany's grain imports in 1975 were 6.7 million tons, with corn, the major grain import, accounting for nearly half the total. The United States, the major supplier of corn to West Germany, supplied nearly 80 percent of the market. France is our main competitor; however, in recent years French corn has been relatively scarce and U.S. corn shipments to West Germany have steadily increased.

Denmark and the United Kingdom are the major source of barley imports, with each providing about 28 percent of the total in 1975.

Between 1972 and 1975, West German wheat imports dropped by 50 percent. Wheat consumption peaked during the 1972/73 marketing year and declined steadily after that. Concurrently with the declining consumption, wheat production trended upward until the 1975/76 season, when poor weather reduced yields.

The EC provides over half of the soft wheat imported by the West Germans. In 1975, the U.S. share was somewhat over 30 percent. The U.S. share of West German hard wheat

imports in 1975 was 47 percent, an increase from 34 percent in 1973. Canada has been the traditional competitor with the United States in this market.

West Germany is a major import market for oilseeds and vegetable oils, as domestic consumption and reexports of these products are high and production relatively low. Rape-seed is the only oilseed grown to any extent in West Germany. Soybeans account for most of the oilseeds imported. As West German crushers attempted to satisfy both their domestic and foreign buyers with meal and oil, oilseed imports expanded by over 50 percent between 1971 and 1975--to 4.3 million tons.

In 1975, soybean imports accounted for over 80 percent of West German oilseed imports, with the U.S. share at 67 percent. We have been facing increasing competition from Brazil, whose share was 32 percent in 1975 versus 23 percent in 1974 and 3 percent in 1971. In 1975, U.S. shipments of soybeans and soybean cake and meal to West Germany plunged 40 and 17 percent, respectively, below the 1974 levels. This occurred despite increased West German domestic consumption of soybean meal in 1975 (to 2.8 million tons), stimulated by a drop in prices and poor grazing conditions.

An analysis of demand for soybean meal in West Germany, carried out by the U.S. Agricultural Attache's office in Bonn for the period from October 1974 to February 1976, through surveys of representative feed mills, revealed the following major points: (1) use of soybean meal in cattle feed is becoming much more important. Until recently, hog and poultry feeds accounted for the bulk of soybean meal consumed; and (2) the share of soybean meal in feeds varied among the surveyed companies in cattle feed, significantly in hog feed and slightly in poultry feed. Traditionally in West Germany, soybean meal is considered the most price responsive component of cattle feed.

Meat imports from the U.S. have declined considerably from the mid-sixties, largely because of the Common Agricultural Policy on meat and West Germany's stringent health regulations, especially for fresh meat. As the U.S. position deteriorated, the EC's share of the West German market rapidly increased. Most of the U.S. meat imported by West Germany is processed meat and offals.

U.S. tobacco exports to West Germany have been slipping gradually over the past few years and then in 1975 dropped 7 percent. The high price of U.S. tobacco, coupled with a need for tobacco low in nicotine and tar, caused the decline.

After extremely low sales of U.S. cotton to West Germany during the late sixties, the picture improved considerably in the early seventies, but U.S. cotton was again priced out of the West German market. Exports plunged in 1975 as the U.S. product was replaced by relatively inexpensive Russian cotton.

### Outlook

In recent years, real disposable income has risen in West Germany, and consumption of more high protein products such as meat, cheese, and fish, as well as prepared and convenience items, has risen. For some of these products, the domestic supply is not sufficient. Also, production of meat and dairy products relies heavily on imported inputs such as grain and protein feed. This has created a favorable climate for imports, which will probably continue in the long run. However, the fast pace of the sixties and early seventies cannot be sustained indefinitely, partly because of the current declining rate in population growth.

The continued expansion of intra-Community trade, as well as the continuing extension of EC tariff preference to U.S. competitors, threatens our share of the West German market. The longrun success of U.S. commodities on the West German market depends on access to that market, as well as maintaining price and quality competitive products.

The shortrun outlook for U.S. agricultural exports such as feedstuffs (oilseeds, feed grain, etc.,) is good because of the drought damage experienced by West Germany and other EC countries this past summer.

Table 4.--West Germany: Total and agricultural trade and agricultural trade as percent of total trade.

# AGRICULTURAL EXPORTS REACH RECORD

## \$23 BILLION IN 1976

---

Exports of farm products totaled a record \$23 billion in calendar year 1976--up 5 percent from 1975's \$21.9 billion. Shipments in 1976 exceeded the previous record of nearly \$22 billion set in 1974 by 4.5 percent.

Export volume also set a new record at just under 112 million tons, up 13 percent from 1975's 98.7 million tons, and 3 million tons above the previous high during 1973. Lower export prices for grains resulted in the smaller 1976 value increase.

Animal and animal product exports grossed \$2.38 billion, compared with about \$1.7 billion in 1975. Live cattle, tallow, beef, pork, poultry, and hides showed substantial gains, with shipments to Japan, Canada, and Middle Eastern countries up noticeably. Foreign currency exchange rates in relation to the dollar were generally higher, resulting in increased competitiveness for U.S. goods. Foreign demand for meat and poultry, especially in the Mid-East, also advanced because of larger exchange reserves and personal incomes.

Fruit exports totaled \$770 million, up from just under \$700 million the previous year. Juices, canned peaches, dried fruits, and fresh citrus shipments advanced from 1975 levels. Among edible nut exports, which amounted to \$198 million versus \$169 million a year ago, almonds and walnuts registered gains.

Grain exports, at \$10.9 billion, fell 6 percent from the \$11.6 billion record achieved in 1975. Lower prices accounted for the decline since volume exceeded 1975 levels. Feed grain exports reached a record volume of 51 million tons and became the largest farm product export in value terms at \$6 billion. Shipments to Western Europe increased because of summer drought effects on forage crops. The USSR and East European countries also purchased large amounts of U.S. feed grains in continued attempts to raise livestock production.

Direct feed grain exports to the USSR neared 9 million tons (\$1.1 billion) versus 3.2 million tons (\$424 million) in 1975. Transshipments through Canada and Belgium to the USSR amounted to 1.2 million tons in 1975, compared with 260,000 in 1975. The USSR thus moved ahead of Japan to become the largest single destination for U.S. feed grain exports. Japan took 8.8 million tons of U.S. feed grains in 1976--more than a million over 1975. Direct shipments to West Germany totaled 5.7 million tons, but an estimated 2.2 million tons subsequently moved to East Germany and Czechoslovakia (1.9 million and 300,000 tons, respectively). Shipments to Poland advanced to 2.2 million tons from 1.5 million in 1975.

Direct feed grain exports to the 9 EC members rose to 17 million tons from 13 million in 1975. Larger shipments also took place to Portugal, Korea, Taiwan, Egypt, and Iran.

Oilseed and product exports neared \$5.1 billion, compared with \$4.5 billion in 1975. Soybeans, oilcake and meal, sunflowerseeds, and peanut oil accounted for the gain. Soybean volume jumped 23 percent over 1975's 12.5 million tons to 15.3 million tons as foreign use accelerated. Protein supplement feeding rates increased as economic conditions improved and drought reduced crop yields. Western Europe, Japan, the USSR, Korea, Romania, and Mexico imported more U.S. soybeans during 1976. East Europe, Italy, Spain, Canada, and Japan imported additional oilcake and meal for livestock feed supplements. Exports of feed and fodders--hay, alfalfa, corn byproducts, and prepared feeds--rose 43 percent in value to \$449 million during 1976.

Fresh and prepared vegetable exports in 1976 totaled a record \$674 million, over one-third more than a year earlier. Shipments of fresh potatoes, onions, and lettuce were well above 1975 rates. Drought effects on West European crops resulted in substantial increases in imports of U.S. vegetables.

Raw cotton exports dropped 11 percent to 3.43 billion bales (480-lb. average weight per bale) in 1976 from 3.84 million a year previous. Because of higher average prices, however, value edged up slightly to over \$1 billion from \$991 million.

1/ PRELIMINARY

2/ NEW CLASSIFICATION EFFECTIVE JAN. 1, 1976 EXCLUDES TURKS, CAICOS, AND CAYMAN ISLANDS.

NOTE: MNO = 1,000 HEAD OR PIECES

MLB = 1,000 POUNDS

MREA = 1,000 RUNNING BALES

MGAL = 1,000 GALLONS

MMT = 1,000 METRIC TONS

MBU = 1,000 BUSHELS

MSTN = 1,000 SHORT TONS

ZERO Quantities indicate none or less than 500 units.

Table 26.--U.S. agricultural exports: Value by commodity,  
October-December 1975 and 1976 and December 1975 and 1976

Commodity	Oct.-Dec.		Change	December		Change

# RECORD AGRICULTURAL IMPORTS OF \$11 BILLION IN 1976

---

by  
Susan A. Libbin

Imports of U.S. agricultural commodities were valued at \$1,095 million in December 1976, 13 percent higher than in the previous month. Increases occurred for both non-competitive items, mainly green coffee, and competitive commodities, chiefly cane sugar.

Volume and value of coffee imports continued to rise in December. After declining for several months sugar imports rose 63 percent in value in December, but were below most months between January and September. Sugar prices also rose in December, but were still considerably less than during the first 8 months of 1976.

Imports of fresh and frozen beef and veal (mostly from Australia and New Zealand) of \$29 million in December were 75 percent less than the previous month and by far the lowest amount imported during any month in 1976 or 1975. Over 90 percent of the import quota had been met by December and thus only a small amount was permitted under the Meat Import Act.

Agricultural imports for calendar 1976 reached a record \$10,991.7 million, 18 percent higher than in 1975 and 9 percent above the previous high in 1973. Noncompetitive items--mostly green coffee--accounted for most of the increase.

Coffee import prices were \$1.398 per pound in December 1976, compared with \$.683 per pound in December 1975, partially causing the 68-percent value increase in 1976 coffee imports over 1975. Coffee import volume declined slightly in 1976. High coffee prices are partly due to reduced output in principal producing countries, resulting from weather, disasters, and other factors.

Imports of competitive agricultural commodities increased slightly in 1976. Principal value increases occurred in imports of beef and veal, live animals, vegetables and preparations, wine, tobacco, and dairy products. Because import prices of various vegetable oils (such as coconut oil) and sugar cane averaged much less in 1976 than in 1975, vegetable oil and sugar imports declined in value in 1976, but rose in volume.

The decline in sugar prices was due partly to prospects for larger harvests in Western Europe and the USSR, bumper crops in several major producing Southern Hemisphere countries, reentry of Brazil into the export market, and decreased consumption and greater use of high-fructose corn syrup. <sup>1/</sup>

<sup>1/</sup> The Meat Import Act, P.L. 88-482 (1964) provides for quotas on fresh, chilled, or frozen beef, veal, mutton, and goat meat. Fresh, chilled, or frozen boneless beef accounted for more than 90 percent of the import volume in 1970-76. The data in this table include rejections by APHIS inspectors totaling 21.0 million pounds in 1971, 17.8 million pounds in 1972, 18.4 million pounds in 1973, 9.6 million pounds in 1974, 12.4 million pounds in 1975, and 12.9 million pounds in 1976.

<sup>2/</sup> Preliminary.

Table 40 --U.S. sugar imports: Quantity and value by month and average  
import unit values, January 1974 through December 1976

1/ PRELIMINARY

2/ NEW CLASSIFICATION EFFECTIVE JAN. 1, 1976 EXCLUDES TURKS, CALCOS, AND CAYMAN ISLANDS.

NOTE: MNO = 1,000 HEAD OR PIECES

MLB = 1,000 pounds

MRBA = 1,000 RUNNING BALES

MGAL = 1,000 GALLONS

MMT = 1,000 METRIC TONS

MBU = 1,000 BUSHELS

MSTN = 1,000 SHORT TONS

ZERO Quantities indicate none or less than 500 units.

Table 44.--U.S. agricultural imports: Value by commodity,  
October-December 1975 and 1976 and December 1975 and 1976

Commodity	Oct.-Dec.		Change	Dec.		Change
	1975	1976		1975	1976

1/ PRELIMINARY

ZERO denotes Nil or less than 500 units

MLB = 1,000 pounds

MLTN = 1,000 long tons (2,200 lbs.)

MGLN = 1,000 long coils (2,200 lbs.)  
MGLB = 1,000 pounds, greasy basis

MNO = 1,000 head or pieces

MRBA = 1,000 running bales (480 lbs. net)

 $MBU = 1,000 \text{ bushels}$ 

MSSTN = 1,000 short tons (2,000 lbs.)

MGAL = 1,000 gallons

# INTERNATIONAL PRICE HIGHLIGHTS C 77

---

by  
H. Christine Collins

## The 1976 Foreign Trade Price Situation

In 1976, overall U.S. agricultural trade prices remained at about the same level as they were in 1975, with price developments for some commodities offsetting those for others. The index of U.S. agricultural export unit values declined 7 percent to (1967=100), reflecting declines for all the major grains, wheat flour, and soybean oil and increases for soybean meal, cotton, tobacco, inedible tallow, and whole cattle hides. The index of U.S. agricultural import unit values rose 6 percent. Coffee, comprising one-fourth of total U.S. agricultural imports, experienced a 73-percent rise in terms of import unit value, while that of sugar, which accounts for 10 percent of U.S. agricultural imports, fell 50 percent. Beef, hams, rubber, cocoa beans, bananas, wines, tobacco, and wool also had higher unit values.

### Exports

The export unit value of wheat, at \$3.98 a bushel, declined for the second year because of improved world wheat crops. <sup>1/</sup> A record 1975 U.S. wheat crop followed by a record 1976 world wheat crop gave assurance that the world's food situation had improved from earlier years. Slowdown in foreign demand was reflected in the decline in U.S. wheat exports in 1976, as well as in the 12-percent decline in the export unit value. The unit value of wheat flour, at \$4.39 a bushel, declined only 5 percent so that the wheat equivalent of flour was priced 10 percent higher than wheat. In 1975, wheat and wheat flour equivalent were nearly equally priced.

The U.S. export unit value for rice declined one-fourth to 14.5 cents a pound in 1976, as a record 1975 world crop was followed by a near-record 1976 crop. U.S. rice exports were priced only 2.2 times as much as wheat, an unusually low price ratio.

Corn's export unit value slid 11 percent to \$2.98 a bushel, reflecting the record 1975 U.S. feed grain crop and record 1976 world feed grain output. Through both 1975 and 1976, U.S. corn was reasonably priced in comparison to wheat--at a price ratio of .8 in both years. U.S. corn sales to the Soviets in early 1976 and the pickup in demand for feed in drought-stricken Western Europe late in the year kept the quantity of U.S. corn exports higher than in 1975. Most of the feed grain purchases by the European Community were from the 1976 crop, when prices fell as a result of the record corn crop. The 1976 export unit value for grain sorghum was 7 percent lower than that of corn.

For soybeans, the export unit value declined 6 percent to \$5.89 a bushel, primarily because of the record 1975 soybean crop. By midyear however, export unit values of soybeans had already begun to show the buoying influence of the short 1976 U.S. soybean crop. While the 1976 soybean meal unit value rose slightly to \$161 a ton, the soybean oil unit value declined by one-third from 1975's record level to 21 cents a pound.

---

<sup>1/</sup> See World Agricultural Situation, WAS-12, Dec. 1976, for detailed accounts of recent commodity developments.

The 1976 export unit value for cotton strengthened by one-fourth to \$305 a running bale as the U.S. and the world produced disappointing cotton crops for the second consecutive year. A pickup in milling activity since late 1975 also gave impetus to rising cotton prices.

#### Imports

Rising prices for Brazilian coffee caused the U.S. import unit value for coffee to increase from 58 cents in 1975 to \$1.01 a pound in 1976.

In contrast, the import unit value for sugar was only one-half of last year's record level as 1976 sugar crops rebounded from last year's shortages. The 1976 import unit value was \$253 a short ton, or 12.5 cents a pound.

Import unit values for fresh and frozen beef and veal and canned hams and shoulders improved from a year ago.

The import unit value for rubber, at 32 cents a pound, strengthened 35 percent because of the upturn in U.S. and world automobile tire manufacturing.

While cocoa bean prices are now increasing because of a sharp production shortfall in 1976, the cocoa bean import unit value was more heavily influenced by the 1975 crop. The 1976 cocoa bean import unit value, at 68 cents a pound, was 10 percent higher than it was in 1975.

#### December 1976 Prices

In December, trade prices strengthened for corn, sorghum, soybeans, soybean meal, cotton, imported cow meat, coffee, and cocoa beans. Wheat, rice, sugar, and crude rubber prices weakened. The Dow-Jones commodity spot price index, reflecting these changes, rose 2 percent to 360.

The pressure of record world and U.S. wheat crops continued to dampen the Gulf ports price of U.S. Hard Winter wheat (HWW). At \$2.93 a bushel, the December price was three-fourths the level of a year earlier and slightly less than it was a month earlier. Keeping U.S. wheat export prices from sliding further were the reportedly lower U.S. winter wheat plantings (for the crop to be harvested in 1977), inclement weather in winter wheat areas, and the early December report of a Soviet purchase of 300,000 tons of wheat from the 1977 crop.

In the Rotterdam market, the United States is facing price competition with other grain exporting countries. In December, Canadian Western Red Spring wheat, which is generally priced slightly higher than U.S. Dark Northern Spring wheat (DNS), was quoted at \$137 a ton, versus \$139 a ton for DNS. Argentine wheat was being offered at \$107 a ton. At this juncture, the end-of-marketing-year wheat carryover is expected to amount to 1.02 billion bushels or more than a 6-month supply--one of the largest surpluses since 1963. In December, the price differential between the Gulf ports price of U.S. HWW and U.S. No. 2 yellow corn was only \$2 a ton.

In December, the Gulf ports price of corn strengthened 5 percent to \$2.67 a bushel. In mid-December, USDA had raised its corn export projections to a level that indicated the expected season-end carryover may amount to only about a 5-week supply.

The bitterly cold midwestern weather boosted livestock feeding requirements in December. Increased feed requirements stemming from drought conditions in the western United States, together with increased grain needs from drought-stricken Western Europe, are all buoying corn prices.

U.S. export prices for soybeans continued their strong drive, reaching \$7.09 a bushel in December and reflecting the tight 1976-77 marketing situation. The Rotterdam price for U.S. soybean meal also continued to strengthen, reaching \$231 a ton.

The c.i.f. Osaka price for U.S. cotton strengthened to 88.6 cents a pound. Although USDA adjusted its estimate of the 1976 crop upward to 10.3 million bales, prospects of increased domestic mill consumption and exports could leave end-of-marketing-year carryover at the low level that was estimated in earlier forecasts.

The Thai rice price, at \$258 a ton, remained steady from a month earlier. The current outlook for the 1976 marketing year is for a slightly lower crop than last year's record.

Among import commodities, coffee beans continued their upward drive to \$1.96 a pound. News that a major West African cocoa bean exporter had defaulted on commitments to ship large amounts of cocoa beans to Western Europe sent the international cocoa bean market into a flurry of activity in December. The New York spot price for cocoa beans from Accra reached \$1.55 a pound.

Bullish influences brought the price of imported cow meat up to 68 cents a pound. Bearish influences continued to dominate the sugar market. A few purchases in the international sugar market kept the New York spot price of raw sugar from falling further. The New York spot price for sugar was 10.2 cents a pound in December, nearly the level that it had been for the previous 4 months. The New York spot price of crude rubber moderated to 40.2 cents a pound, a slight drop from a month earlier.

# U.S. AGRICULTURAL EXPORTS ADJUSTED FOR TRANSSHIPMENTS, FISCAL YEAR 1976

---

by  
Thomas A. Warden

Earlier estimates of fiscal 1976 U.S. farm exports to some 30 countries are understated because of transshipments through Canadian, Dutch, Belgian, and West German ports. Transshipments through Canada, for example, amounted to \$523 million, with most destined for Western Europe, Eastern Europe, North Africa, and Japan. 1/

In fiscal 1976, about 23 percent of the adjusted export value to the Netherlands--direct exports plus transshipments through Canada--subsequently moved to other countries. European Community (EC) destinations took an estimated \$354 million, or 80 percent of the \$441 million transshipped through Dutch ports. Other Western European countries, the USSR, and East Germany accounted for the remainder. 2/

Over 19 percent of an adjusted \$497 million in agricultural products shipped to Belgium-Luxembourg during fiscal 1976 later moved to other countries. Approximately half of the \$96 million in transshipments through Belgium went to EC members, mainly France. According to the Belgian National Institute of Statistics, substantial amounts of U.S. corn--over 400,000 tons--moved to the USSR beginning in March 1976. 3/ U.S. data indicate that corn exports to Belgium in fiscal 1976 (July 1975-June 1976)--including shipments through Canada and the Netherlands--totaled over 1 million tons, whereas Belgian data indicate that only 480,000 tons of U.S. corn were imported in that period.

The most rapid growth in U.S. grain transshipments has been through West German ports. In fiscal 1976, grain and oilseed shipments through West Germany reached nearly 3 million tons valued at \$430 million. Most of this transit traffic consisted of corn, wheat, and soybean meal enroute to East Germany. 4/ About 23 percent of total U.S. agricultural exports to West Germany was transshipped, primarily to East Germany and Czechoslovakia. The previous year, estimated transshipments through West Germany totaled 1.2 million tons valued at \$219 million and represented 13 percent of the adjusted export value.

Regionally, agricultural exports to Eastern Europe were affected most by transshipment adjustments. Direct exports to Eastern Europe measured by Census Bureau data amounted to only 60 percent of the adjusted \$1.2 billion total. Adjusted exports to the USSR were 8 percent above direct exports. U.S. farm product exports to EC members were 4 percent less after adjustments.

---

1/ Grain and oilseed shipments to St. Lawrence Seaway facilities from U.S. Great Lakes ports have been designated in U.S. export statistics as exports to "unidentified countries" since January 1973. Destinations for U.S. grain and oilseed shipments through Canadian ports are determined from volume data submitted by the Canadian Grain Commission and U.S. grain inspectors, and reported by USDA's Agricultural Marketing Service in Grain Market News.

2/ Destinations for U.S. agricultural products transshipped through Dutch ports are reported by the Netherlands' Central Bureau of Statistics in Statistics of International Goods Traffic.

3/ Monthly reports provided by the Belgian National Institute of Statistics indicate the volume of transshipped U.S. agricultural commodities by destination.

4/ The Hamburg State Statistical Office reports intransit U.S. grain and oilseed product tonnage by destination.

Adjusted agricultural exports to Poland at \$463 million compared with direct shipments of \$447 million. Those to East Germany were \$406 million against only \$35 million on an unadjusted basis. Farm product shipments to Czechoslovakia after transshipment adjustments through West Germany totaled \$148 million versus \$69 million without. 5/

Since some Eastern European countries currently have inadequate port facilities for handling large ships, significant portions of the sizable grain purchases by those countries during fiscal 1976 were offloaded in Western European ports into smaller coastal vessels, barges, and rail cars destined for East Europe and the USSR.

---

5/ Unadjusted agricultural exports by country appeared in the November 1976 issue of this publication.

## Explanatory Note

U.S. foreign agricultural trade statistics in this report include official U.S. data based on compilations of the Bureau of the Census. Agricultural commodities consist of (1) nonmarine food products and (2) other products of agriculture which have not passed through complex processes of manufacture such as raw hides and skins, fats and oils, and wine. Such manufactured products as textiles, leather, boots and shoes, cigarettes, naval stores, forestry products, and distilled alcoholic beverages are not considered agricultural.

The trade statistics exclude shipments between the 50 States and Puerto Rico, between the 50 States and the island possessions, between Puerto Rico and the island possessions, among the island possessions, and intransit through the United States from one foreign country to another when documented as such through U.S. Customs.

**EXPORTS** The export statistics also exclude shipments to the U.S. armed forces and diplomatic missions abroad for their own use and supplies for vessels and planes engaged in foreign trade. Data on shipments valued at less than \$251 are not compiled by commodity and are excluded from agricultural statistics but are reflected in non-agricultural and overall export totals in this report. The agricultural export statistics include shipments under P.L. 83-480 (Agricultural Trade Development and Assistance Act), and related laws; under P.L. 87-195 (Act for International Development); and involving Government payments to exporters. (USDA payments are excluded from the export value.) Separate statistics on Government program exports are compiled by USDA from data obtained from operating agencies.

The export value, the value at the port of exportation, is based on the selling price (or cost if not sold) and includes inland freight, insurance, and other charges to the port. The country of destination is the country of ultimate destination or where the commodities are to be consumed, further processed, or manufactured. When the shipper does not know the ultimate destination, the shipments are credited to the last country, as known to him at the time of shipment from the United States, to which the commodities are to be shipped in their present form. Except for Canada, export shipments valued at \$251-\$999 are included on the basis of sampling estimates; shipments to Canada valued at \$251-\$1,999 are sampled.

**IMPORTS** Imports for consumption are a combination of entries for immediate consumption and withdrawals from warehouses for consumption. Data on shipments valued at less than \$251 are estimated on the basis of a 1-percent sample and are not compiled by commodity. They are excluded from agricultural statistics but are reflected in nonagricultural and overall import totals in this report.

The import value, defined generally as the market value in the foreign country, excludes import duties, ocean freight, and marine insurance. The country of origin is defined as the country where the commodities were grown or processed. When the country of origin is not known, the imports are credited to the country of shipment.

Imports similar to agricultural commodities produced commercially in the United States and others that are interchangeable in use to any significant extent with such U.S. commodities are supplementary or partly competitive. All other commodities are complementary or noncompetitive.

Further explanatory material on foreign trade statistics and compilation procedures of the Bureau of the Census is contained in the publications of that agency.

RECENT PUBLICATIONS ON FOREIGN AGRICULTURE

"The U.S. Farmer in the International Food Situation," Quentin M. West, ERS-651, February 1977. ERS Administrator West views the impact that a rapidly changing world food situation has had on U.S. farmers, with a perspective on the new Federal farm legislation to be drafted this year.

"Impact of a Resale Price Increase on Japan's Wheat Imports," Bruce L. Greenshields, FAER-128, February 1977. An econometric model isolates the impact of a resale price increase on Japan's wheat imports.

"Agriculture in the United States and the Soviet Union," Fletcher Pope, Jr., FAER-92, January 1977. Farm efficiency, measured in terms of output per unit of input, is substantially higher in the United States than in the USSR for land, livestock, and labor.
